Busy Session of Town Council Last Monday

Council Petitioned to Request Government to Cancel Local Bus Franchise.

There was a busy session of the town council last Monday evening. More than the usual number of delegations appeared and were heard. The first was Mr. Blanchard who, on behalf of Mr. Bergeron, presented a petition to council, signed by 1.3 citizens of the town. The petition was a request to council to memorialize the provincial government asking that the present franchise which controls the bus service between here and Medicine Hat, be cancelled. Mr. Blanchard pointed out that in the opinion of the petitioners the present service was unsatisfactory as those who were unable to catch the bus on schedule were forced to hire a jitney at an excessive rate which the jitney man was compelled to charge under the present system. He contended the present franchise was an imposition on the citizens of both centres since the government owned and controlled only 2 1/2 miles of the highway between the two municipalities yet were controlling the service between the two points. This, Mr. Blanchard claimed, gave a monopoly to one man and so barred other taxi drivers who were paying taxes and other licenses, from securing some of this transient business. The present holder of the franchise, he claimed, would not be hurt if put on a fair competitive basis with other jitney drivers, or these reasons he asked council to pass a resolution asking the provincial government to revoke the present franchise so that all taxi drivers be on an equal basis.

Mr. Blackstock appeared on behalf of Mr. T. H. Van Wert. He was informed that many who signed the petition did so to please those who took it around. He explained that the government saw fit to pass the Public Vehicles Act which imposes certain duties on the one who takes out a franchise. These duties give the public protection and Mr. Van Wert took advantage of this act by taking out a franchise. Mr. Blackstock claimed the council was being asked by the petition to do something outside its jurisdiction, and he therefore suggested that it be not considered by the council.

On motion of councillors Burgrave and Sangster the matter was left over till next meeting of council for further investigation. Councillors Shaw and Broughton voting nay.

Rev. M. Stewart waited a council on behalf of the local Legion. He thanked the council for their kind offer of lots for the purpose of erecting a war memorial. Mr. Stewart assured council that the building of the memorial would be proceeded with at once and grounds laid out with trees and shrubs. This being the case, he asked the assurance of council that the town would undertake the task of looking after of the surroundings when work

Safeways Wins League Game Here

Locals Blew Up in First Turn In Field

Seven runs in their first innings put the game on ice for the Safeway girls in their league game with the locals here last Monday evening. It was lucky they did their scoring in their first frame as in the balance of the game the Cliff Dwellers scored seven runs to the visitors two.

It is seldom a whole team blows up at once, but this was the case with the Cliff Dwellers when they took the field for their first innings. In this the pitcher was a bit wild but she got absolutely no support from the field and the visitors' seven runs were made very largely on costly fumbles in the field. Of the seven runs made by the visitors in this frame only two were made by what could be called safe hits. This innings was all that spoiled an otherwise real good game, as the visitors went out one-two-three in their turn at bat. From this on however, things were different. The dwellers tried hard to even the score but at the finish were just two runs short. The game ended 9-7 for the visitors.

The next girls' league softball game will be played here on Monday the 19th with Eaton girls.

Mr. R. S. Hodge is spending a few days in Calgary this week on business.

Billy Sellhorn left for Minneapolis on Tuesday to spend his vacation with his aunt there. He will also visit other eastern points.

was completed. The request of Mr. Stewart was granted on motion of councillors Broughton and Shaw.

Representing St. Ambrose Church Mr. Stewart asked for permission to use water for longer hours owing to the pressure at the church and the extra amount of property around the church and manse. Instead of departing from the bylaw, council decided that the cause of the low pressure was a faulty connection and offered to make a new connection at once. This was satisfactory to Mr. Stewart.

A letter was read from the Utilities Commission acknowledging receipt of \$6000 from the town and advising that same was invested in provincial savings.

Mr. Blackstock wrote council giving advice as to the conditions surrounding the Roth well. The communication was received and filed and, on motion of councillors Shaw and Newbush instructions were given to have caveat filed on the Roth well.

The usual monthly accounts were approved for payment.

T. H. Van Wert made application for restaurant and soft drinks license. Same was granted by council.

Mr. Van Wert also wrote offering \$150 for the old Royal Cello building on Second street, same to be moved to Broadway. The offer was not accepted.

Annual Recital Was Great Success

Given by Pupils of Messrs Woodruff and Knapper

The recital given by Merrill Woodruff, pianist, and Paul Knapper, violinist, in the I. O. O. F. hall last Friday evening drew a good house. The lengthy program of forty-four numbers was carried through with great dispatch and from the tiny tots to the advanced senior pupils, all performers gave credit to their pupils, Little Maxine Grande, a big two dance numbers given by Miss Marjorie Colter and her pupil, little Maxine Grande, added variety and were well received. Those from Redcliff taking part were Misses Muriel Collard, Emma Podesta, Effie, Jessie and Flora Stratton and Helen Obay. All of whom compared most favorably with other performers.

Mr. Woodruff and Mr. Knapper are to be congratulated upon the splendid showing made by their pupils in their second recital held in Redcliff.

AT HYMEN'S ALTAR

Bodner-Towle

The home of Mr. and Mrs. J. M. Towle, Medicine Hat, was the scene of a pretty wedding on June 10th when their second daughter, Madeline, became the bride of Mr. Frank Bodner, of Redcliff. The bride, who was dressed in white georgette and lace, was carried away by her father. The bridesmaid, Miss Alberta Loveless, was in white and pink crepe and carried pink carnations. Mr. Arthur Towle supported the groom.

The room and tables were beautifully decorated in white and pink, the table being center with the wedding cake and pink and white carnations.

Miss Dorothy Kitchen played the wedding march. Rev. M. S. Blackburn was the officiating clergyman. After the ceremony a dainty wedding luncheon was served with young couple will make their home in Redcliff.

Instructive Addresses Given Here Saturday

Officials of Manyberries Ranch Station Discuss Methods for Betterment of Stock Raising.

Although Cliff Hall was fairly well filled for the meeting held here last Saturday evening at which L. B. Thomson and Mr. Clark, of the government ranch station at Manyberries delivered addresses, there were not as many farmers from the surrounding district present as were expected.

Both speakers gave very instructive addresses on the successful raising of stock in this district, much of which information was gained by experiments on the ranch at Manyberries. Grasses, forage crops, water, and the protection of the pastures were among the main topics treated.

The speakers claimed that the native grasses in this district were the best possible for stock, since they provided high protein for growing animals in the spring, and carbohydrates later in the fall. For this reason these native grasses should be protected as much as possible by preventing the grass lands from being overstocked. Fifty acres of native grass per year was mentioned as the limit for grazing purposes. More than this meant that ultimately the native grasses would be killed and replaced by weeds of various kinds.

For water the building of dams in coolies in order to create reservoirs was recommended. To insure water for the season these dams should be built to conserve at least eight feet of water. Great care in constructing dams should be taken. To make it secure a dam 8 feet wide at the top should be 75 feet wide at the bottom. Dams should be scattered around the grazing land so that cattle should have not more than two to three miles to go for water.

Over feeding cattle in the winter in order to put on weight was discouraged, as in the spring cattle around 800 round were now more in demand than the heavier ones.

In answer to a question: Why the government did not supply suitable bulls to farmers Mr. Thomson stated that the Dominion government had been doing this for some time and now had 600 such bulls in Alberta. He advised those wanting to take advantage of this plan to communicate with the department of Agriculture, Ottawa.

It was pointed out that small irrigation schemes could be developed in this district when 3 or 5 acres could be irrigated. Alfalfa is a good feed as it supplies qualities which other grasses lack. Alfalfa should be sown without nurse crop. The ground should be well prepared in dry land it should be sown 2 1/2 or 3 feet apart and cultivated well.

At the station at Manyberries it was found that crested wheat grass was the best for dry land as it was hardy and early and the cattle liked it. It was sown 8 or 10 bushes to the acre by using two spouts locking the

(Continued on Back Page)

Cadet Inspection Held Last Thursday

Major Miller Compliments Lads For Excellent Work

In spite of the high wind which blew steadily all last Thursday, the cadet inspection by Major W. L. Miller, D. S. O. took place at the time appointed, although not at the place appointed. The school grounds which received the full brunt of the wind, were abandoned for more sheltered quarters in the lee of the houses of Mrs. Grieves and C. T. Hall.

A splendid crowd attended the performance. The whole corps first went through the platoon drill under the direction of the different officers. Mr. King then conducted platoon P. T. followed by an exciting game of pass ball. The sixteen competitors for the Army and Navy shield, led by A. Podesta, performed with accuracy and precision, a series of splendid exercises which terminated with two pyramids, calling out the attention and prolonged applause of the spectators.

In the rifle inspection, Leonard Larson won the medal for highest score—98, and the signaller won high appreciation from Mr. Miller. The whole event was one of great interest and satisfaction to the spectators. Platoon leader, Albert Podesta, deserves great credit for the efficient manner in which he performed his duties, as do also the boys themselves for their splendid response to leadership. And to Mr. King must go the greatest measure of thanks and appreciation of the parents and other citizens of the town for making such a splendid performance by the lads, possible. Apart from the winning of medals and shields he is building in the boys strong bodies and alert minds, with which there is no great service to the youth of any generation.

The result of Major Miller's inspection will be awaited with great interest.

The Local Rebekahs Attend St. Ambrose

At Regular Service Last Sunday Evening

Officers and members of the local Rebekah Lodge attended St. Ambrose church in a body last Sunday evening.

The Lord Bishop of Qu'Appelle, on behalf of the rector and congregation, welcomed the visitors. In his welcoming remarks his Lordship stated that it had been said that the Ladies were taking the place of the churches, but their periodic attendance at church in a body was not only a public recognition of the value of the church and the worship of God, but a contradiction of this statement. He expressed the opinion that if ladies and the churches worked together in harmony much good for both could be accomplished, but members of fraternal societies who thought they could go along without the churches and church worship, were, in his opinion, making a mistake.

The Lord Bishop Of Qu'Appelle Here Last Sunday

Officially Dedicated Memorial Cross in St. Ambrose Church To Memory of Late Rev. T. J. Cox.

"He was a good man full of the Holy Ghost and of faith, and much people were added unto the Lord."

With these words as his text the Lord Bishop of Qu'Appelle gave a most interesting and impressive address in St. Ambrose Church last Sunday evening on the life of the late Rev. Francis Joseph Cox, at the time pastor of St. Ambrose Church here.

The occasion of the visit of the Lord Bishop to Redcliff was for the purpose of dedicating a beautiful brass cross, donated by St. Ambrose congregation, to the memory of their late vicar. After the dedication ceremony the cross was placed in the chancel of the church where it will remain as a mark of the love and respect in which the late Mr. Cox is held by his parishioners here.

In his address, the Lord Bishop made many references to the life of the late Mr. Cox whom he had known intimately for over forty years. The life work of the deceased since entering the ministry was reviewed by the Lord Bishop who referred to the splendid work of Mr. Cox among the Indians in his younger days, his intense zeal for the welfare of his flock and his unflinching faith in the grace of God. Mr. Cox the speaker said was a real student and one who made the best of his opportunities, and was to one whom the words of his text most fittingly applied.

At the close of the service the Lord Bishop made a special appeal for the prayers of the congregation for the success of the World Economic Conference to open in London the following morning.

The church was well filled for the occasion. After the service a reception was held in the parish hall where his Lordship renewed old acquaintances and met many new friends. His pleasing manner no doubt, took many minds back to the scene which prompted the poet to write: "E'en children followed, with endearing wile, and plucked his gown, to share the good man's smile."

TO PROCEED WITH THE WAR MEMORIAL

Good progress was made at a meeting of the war memorial executive held last Monday evening.

Plans for the laying out of the grounds and the design of the monument were submitted and approved by the committee and most encouraging reports were submitted. It was decided to commence at once with the work of preparing and laying out of grounds. The following sub-committees were selected:

Finance and publicity: Rev. Stewart, Dr. Ward and H. J. Cox.
Building: Messrs. A. E. Swan, F. Broughton and W. Hill.
Supplies: Mayor Worts and J. R. Cain.

The Leader for Forty Years

RE

"Fresh from the Gardens"

Shall Broadcasting Become a Monopoly?

Canadian policy regarding radio broadcasting is a very live subject for discussion and naturally so because the radio has become such an intimate thing in the homes of Canada. It is to the radio that many people, and more especially those in rural parts or where a daily paper is not immediately available, now look to supply them with the correct time, weather forecasts, latest market prices, outstanding news events throughout the world, music for a little dance, religious services, and entertainment of all kinds. It is, therefore, of national interest and policies and regulations governing radio broadcasting are of interest not only to Canadians as individuals as well as to Canada as a nation.

Following investigation of the subject, a Royal Commission reported unanimously in favor of nationalization of broadcasting in Canada. Later parliamentary committees endorsed the policy, and finally, by a non-partisan vote in the House of Commons it was adopted. There was almost complete unanimity on the subject and Canadians everywhere were prepared to welcome and assist in the development of a great national undertaking and service. That was only a year ago, but that unity has disappeared and dissatisfaction is being voiced by the press, numerous organizations, and individuals everywhere. It is rare indeed to hear of any person who is satisfied. The general dissatisfaction has been aired in Parliament and Premier Bennett has promised further study of the whole subject by a special Parliamentary committee next session in an effort to bring back the old unity that prevailed a year ago.

What caused such a complete change in public opinion in a few months cannot be discussed in detail, but from the very beginning the Radio Commission appointed members had a wide representation of people and of views, being too dictatorial. It first inaugurated a series of orchestral and symphony concerts. At first these were appreciated by many, but when variety in programmes was forthcoming, sending out symphonies and orchestras from Toronto and Montreal, people who desired something more to be criticised. Then followed a series of restrictive regulations and prohibitions imposed on all stations. But the final act of the Radio Commission which does not appear to have pleased anyone was the alteration of the wave lengths of stations throughout Canada in such a manner as to shut out many of the most popular programmes from United States stations in an apparent effort to compel Canadians to listen to the Canadian Commission's programmes whether they desired to do or not.

The Commission being a national body, and in an official sense Canada being a bi-lingual country, the Commission is therefore required to present programmes in French as well as in English. Thus many of its programmes are quite un-understandable to thousands of people in the Provinces, other than Quebec, and while they do not object to programmes being broadcast for the French-speaking portion of the population, they do resent the action of the Commission in so changing wave lengths that they cannot listen to the programmes. Furthermore, many people feel that these French programmes might well be confined to Quebec and not carried from coast to coast.

Announcement is now made that the Radio Commission proposes to build two high power broadcasting stations, one in Saskatchewan and one in British Columbia, and that with the erection of these stations at a cost of approximately a quarter of a million dollars all present stations will be reduced to 100-watt power, thus reducing them to the status of stations with a range limited to a small local district. The result must be the closing of all such stations because they cannot command the commercial support necessary for their maintenance and operation.

In other words, it is not merely public control of radio broadcasting in Canada, which is the vast majority of people favor, but it is now contemplated, but the creation of a Government monopoly of broadcasting, which is quite a different thing, and a proposal which has aroused strong protest.

What is the intention back of this latest decision? It seems to be stated by W. A. Beynon, M.P. for Moose Jaw, in a letter to a radio association says in part: "If the principle of national broadcasting is going to be carried to its logical conclusion, it means the ultimate wiping out of all small stations. This, it seems to me, is foolish and the whole question is to continue the policy of national broadcasting or go back to the individual, privately owned broadcasting stations? That national broadcasting will be more economical there can be no doubt. Whether it will, or will not serve the public better, or even whether it will or will not serve them better is another question."

Here is a question in regard to which the people most concerned—the listeners—should make their views and wishes known to their local M.P. In order that he may present their views to the Parliamentary committee next session. And in the meantime, it would appear that the proper policy for the Radio Commission to pursue would be to stay their hand in the expenditure of large sums of public money in the erection of new broadcasting stations until that Parliamentary committee conducts its investigations and reports its findings.

The Prairie Crop Acreage

Within His Rights

Two-Third of Field Crop Acreage of Canada in Western Provinces

Over two-thirds of the field crop acreage of Canada is concentrated in the three prairie provinces, and most of this area is needed to the grain crops, with wheat predominant. Roughly speaking, the specialized wheat areas cover the southern half, grass plains from the Red River Valley of Manitoba to the foothills of Alberta and attain their greatest width in central Saskatchewan.

London recently had a bench show for decahubs only.

Headaches and Dizzy Spells Nerves in Bad Condition

Mr. Neil Crawford, Hamilton, Ont., writes: "My nervous system is in such a bad condition that it is almost impossible to get a good night's sleep. I was also bothered with headaches and dizzy spells."

I tried many different remedies, but they did not seem to give me much relief, but after I had taken Milburn's Heart and Nerve Pills I made hardly believe the change they had made in my condition."

Seeking Lost Continent

British Scientists Are Preparing To Explore Indian Ocean

British scientists are to explore the bottom of the Indian Ocean, four miles below the surface, in a search for traces of the lost continent of "Lemuria."

An expedition under Captain J. D. MacKenzie, who captained the "Discovery" of Sir Douglas Mawson's last voyage in the Antarctic, will leave London in August to begin the search. They will be nine months at sea between Africa and India in their research effort of only 100 tons. The craft is now being fitted at Alexandria with latest inventions for underwater exploration.

Steel bottles, which close automatically at a certain depth, will be let down to take specimens of the sea life and record temperature. Lead lines will be dropped four miles down to take samples of the ocean floor.

In this way the expedition hopes to discover traces of the continent of "Lemuria," which is supposed to have stretched from Madagascar to Sumatra and India in pre-historic times. Another object is to discover whether there are mountain ranges, and to explore under the surface of the Indian Ocean. The scientific leader of the expedition will be Colonel Seymour S. D.E., director of the zoological survey of India.

Weather Man Fields

Has Always Staged Stolen Changes

Old Diary Proves

Judging from a diary kept by Mrs. Reid, wife of Colonel Reid, who was commander of the German mercenary troops stationed at Three Rivers, Quebec, from 1778 to 1782, the weather man, who was as fickle in her day as he is now, in fact a sudden change in temperature spoiled her chances of getting to Montreal for her spring cruise.

Mrs. Reid's diary, discovered by officials of the McCord Museum in Ottawa, was written for an extensive collection illustrating Canadian history during the period of 1770-1870, reveals that it was evidently her custom to set out one spring for the metropolis by horse-drawn carriage, travelling on the ice of the St. Lawrence. At about an overnight stop was made and during that time a rapid change in the weather took place. Imagines her disappointment when the good lady arrived at the city, only to find her mail, having up the river where she had only the night before travelled on ice.

To Salvage Gold

Italian Vessel Engaged In Hailing

Treasure From Sunk Liner

The Italian salvage ship "Aniglio" has sailed for the coast of Africa, approximately \$1,500,000 in gold still in the strong room of the sunken P. and O. liner "Titanic," lying 20 fathoms off Cape Hatteras.

In four previous summers of work the Italian divers recovered \$2,500,000 of the large cargo of the liner in gold and silver which the liner carried from London on her last voyage, May 19, 1912. The "Egypt" sank in 20 minutes after being rammed in a fog by the French freighter "Sena." Of the 44 passengers and 891 crew, 96 lives were lost.

After finding with the "Egypt," the "Aniglio" probably will be engaged by the Egyptian government to seek gold and other treasure from Napoleon's ships which were sunk by Lord Nelson off Aboukir Bay in 1798.

Child Prodigies Banned

From French Stage

Any Under Thirteen Are Not Allowed

France has definitely banned child prodigies from the stage. Legally no one under thirteen is allowed to appear, but especially since the law was issued, "The Cabinet" has decided that no more of these will be given. Child working for the films are included, and many child stars are affected. The decision followed the receipt of reports by the Ministry of Health and Public Education that children on the stage are made to work long hours without sufficient time for study.

The colors of the king of England's racing stables are purple, gold, black, scarlet sleeves and black velvet with gold braid.

British Columbia is the largest silver-producing province in Canada.

Many new small factories are being started in Japan.

NOT A PAIN AT 78

She Feels Like 45

Aches and pains are not inevitable as they grow older, says a doctor. It is always a cause for them—a cause that can be overcome. Here is a little lesson on growing old by a woman of 78:

"For the last five years I have taken Kruschen Salts and I tell you truthfully I could not live better than I do. I am 78 years old. I feel no pain in my body and I have as young as I did at 45, gives the credit to Kruschen Salts. No one will believe my age."—Mrs. C. M.

Most people grow old long before their time because they neglect one vital need of health—the need for internal cleanliness. Eventually they start the healthy Kruschen habit. Then, probably for the first time in their lives, they start getting rid of every day of all waste matter from the system. And almost immediately they feel their youth has returned; they feel energetic and happy. In a word, they've got that famous "Kruschen Feeling."

Exhibits From Britain

Good Representation From United Kingdom In World's Great Show

Leading representatives of the agricultural industry in the United Kingdom will represent their country at the world's grain conference, opening in Regina, Sask., July 24, with agricultural, milling and other international organizations are considering the question of sending delegates. It is also probable a small parliamentary group will visit in connection with the conference.

Announcement was made by the ministry of agriculture that the government of the United Kingdom will be represented by Sir Daniel Hall, director of the John Innes horticultural institute, Sir John Hall, director of the Rothamsted Experimental Station, and of the Imperial Bureau of soil science and William Robb, director of research, Scottish Society for Research in plant breeding.

The Rothamsted station at Harpenden, Hertfordshire, is preparing an extensive exhibit to show the results of wheat from the 89th successive crop grown on the same field under varying conditions. Britain will be represented in competitive classes and in exhibits of small farms. Scotland is sending samples of oats which have been grown on high moors in home competition. In addition there will be wheat and barley exhibits from various parts of England and varieties of cereals, as well as grain will be sent by northern Ireland.

Recipes For This Week

(By Betty Barclay)

HODGE PODGE PUDDING

(Serves 6)

1 cup apricots cut fine.
1/2 cup broken walnut meats.
1/2 cup seeded raisins, chopped.
1/2 cup orange juice.
1 teaspoon ground cinnamon.
1/2 cup sugar.
6 tablespoons bread crumbs.
1 teaspoon butter.
Mix all ingredients except butter. Put into buttered baking dish, dot top with bits of butter and bake covered in a moderate oven (380 to 400 degrees Fahrenheit) until apples are tender. If apples are very dry, increase the amount of orange juice slightly. This is a pudding boys like.

DERBYSHIRE SANDWICHES

Run through the meat grinder enough finely sliced boiled ham to make one cup of it when minced. Add one-half teaspoon minced mustard, few drops tobacco sauce, one teaspoon sugar, salt and pepper to taste, and mix thoroughly. Spread on a smooth plate spread on the slice of buttered bread.

The Hottest Friend

We are all travellers in the wilderness of this world, and the best that we find in our travels is an honest friend. He is a fortune in himself, and when we are alone, we are only nearer to the absent—Robert Louis Stevenson.

Did Old One Drowning

A man was accused at Clerkenwell of having "adopted a floating attitude" to a dog as its owner. "I nearly knocked me down," he explained, "I growled at it." "You mean," suggested the magistrate, "that I growled at you?" "No," the man insisted. "I growled at the dog."

Reports from Indo-China last year were nearly equal to those of 1931.

Plan Long Flight

New York To England Is Aim Of British Flyers

Some time this summer James A. Hargrave, a famous British aviator, will lead a team of British aviators, will lead from Roosevelt Field, New York, on an attempt to set up a new world distance record by flying non-stop to England or beyond.

If they make England they will have beaten by some 700 miles the record of 5,840 miles established in February of this year by the British aviators, Nicolaï and Gayford, when they flew from England to South Africa.

Roosevelt Field was chosen by the Molins as the starting point for their first dual aerial adventure because it is the only suitable airport having a concrete runway.

The laden weight of their machine will be such that experts have advised the flying couple that there is no aerodrome in England with a suitable length and firmness for taking off purposes.

Their machine, now in process of construction in England, will be shipped in parts to New York and will be re-assembled at Roosevelt Field. It is a two-engined monoplane of the De Havilland "Dragon" type, and would normally accommodate six passengers, pilot and baggage.

Three vast cylindrical tanks, placed so close together that they resemble the boiler of a giant locomotive behind the pilot's seat, replace the passenger's seats.

Only one pilot's seat is provided in the forward cockpit, with the second pilot's seat in the rear. The machine will be flown by the Molins to change over the controls of the air. There is a hatchway only one foot in diameter to enable them to crawl from the cockpit, underneath the tanks, to a tiny cabin in the tail of the machine.

The gasoline capacity will enable the machine to fly up to 10,000 miles in average conditions. With a tail-end starting point of the machine, the 8,000-mile limit should be exceeded. Other details regarding the machine and its equipment are being kept secret, but it is not believed that the aeroplane will carry radio.

Records Carefully Kept

Plenty Of Documents About Hudson's Bay Company Trading Posts

"Never has the frontier life of any country been so carefully recorded and so thoroughly documented as the records of the Hudson's Bay Company in Canada," said Douglas Mackay, speaking to the Klamath Club of Montreal.

Under the terms of the original royal charter, London as the head office of the Hudson's Bay Company, remains the repository for all the company's archives, and the collection of these from the posts and outposts a few years ago resulted in a collection of nearly 100,000 documents. The work of organizing and cataloguing this material has been proceeding under the direction of the company's archivist in London. At the present time, this vast collection of historical documents, which is in reality the richest source of material of western and northern Canadian history, is in better shape than the work of accredited historians have ever before.

Earned Gratitude Of Indian Mohammedans

Lord Lothian Arranged Return Of Valued Hebe To India

Lord Lothian, former Under Secretary of State for India, has earned the undying gratitude of millions of Indian Mohammedans by arranging for the return to India of a holy relic on which is inscribed the whole of the Koran. The Koran is the holy book of the Mohammedans. The relic was taken away from India at the time of the mutiny of 1857. It has remained in England in the hands of a noble family. Through Lord Lothian's intervention the owner has made a gift of it to the Muslim Trust in India. The relic is a small tablet of gold, which has been placed in a prominent position in a mosque and is venerated by the faithful. Little is known about the history of the relic.

A Heavy Responsibility

The duty of a heavy responsibility, by resolution, has given Alderman John Coughlin, the Irish Brunell and dean of last body, the sole responsibility of designating the date when Chicagoans may put on their straw hats.

Tons of gold bullion placed in a secret "war chest" before Japan went off the gold standard are said to exist in Tokyo.

Italy expects an increase in employment in the next few months.

Merrily

They Roll Along

No wonder they're merry—rolling their own with Ogden's Fine Cut. It's so easy to roll a smoother, more satisfying cigarette with this fragrant cigarette tobacco.

And they're using "Chanticleer" paper, of course. Ogden's Fine Cut and "Chanticleer"—that, Sir, is the finest combination any man can use for rolling a really better cigarette.

OGDEN'S FINE CUT

Your Fingers Know Ogden's Cut King

Modern Home in Sweden

Disabled Poor Will Have Every Care and Comfort

Sweden is completing construction of its new home for the disabled poor at Nynahammar, near Stockholm, and it is declared to be the most modern in Europe. The building is equipped for curing rheumatism, nerve diseases, asthma, and other afflictions has been installed by the Swedish Pensioners' Association. Five experienced physicians and a large staff of assistants and nurses will be in charge of the medical work. The new home has several beautiful rooms and wards, laboratory, tarsotherapy and galleries for sunbaths and well-equipped gymnasium. There is also a large assembly hall for lectures, stage performances and movies. Success at rehabilitating the disabled pensioners has been encouraging in Sweden, as about 60 per cent of the patients treated have regained ability to earn their own living.

Rhubarb Was Once Medicine

Rhubarb root and rhubarb leaves are now quite common every day. The rhubarb plant was used in pharmacy long before its value as a food became known. It grows wild on the banks of the Volga in Russia, and was used in the making of tarts in 1350 and soon became common in Canada and the United States. It was introduced by the early settlers who found it was scarce.

The office bachelor says the difference between an estimated doll and a modern girl is that the latter doesn't tell "Mamma" when she's lonely.

Britain has nearly 50,000 policemen on regular duty.

Winning World Wheat Honors Was Result Of Hard Study And Work By Herman Trelle

When Herman Trelle of Peace River reached the top of the world agricultural heap he realized that to stay there would require the best tools he could produce. So did his helper, who at times has taken a major part in the soil and at others remained behind the scenes.

Together they topped out a brand new wheat number for the Chicago 1931 show. It clicked and it clicked there would require the best tools he could produce. So did his helper, who at times has taken a major part in the soil and at others remained behind the scenes.

It took a mighty faith and confidence to switch over after the 1931 victory to a species that had been generally rated below four other wheats, and to boost Durum into the following year and in 1932 when they gained more championships. Within those years they captured over 200 medals at the various fairs, East and West.

No more profits were required. Settlers began to pour into the district and prices of land began to rise. Government and public opinion began to take a sudden interest in the district. Long-deferred rail extensions were gotten under way. Representatives of American and European powers found their way into The Peace and to the Trelle homestead.

The climb was not easy. The short growing season due to the far-north location was a big obstacle and it took an enormous effort to make wheat growing general in the district. Their enemies of microscopic study the young couple segregated less than twenty-one distinct species of wheat and then they began to watch the samples that they sowed. How many important things in mind. There was grain-shed in their mind, but even more the environment of an early-tipping wheat which would focus the attention of a sceptical Dominion and disprove the idea that Peace River must forever remain a trapping territory.

Every wheat plant was inspected at various development stages, carefully marked, preserved and labeled. It took years of examining, choosing, crossing and breeding until the dreams and visions of the Trelles began at last to take form.

During the winters of 1931 and 1932 the couple cruised world waters as guests of the Canadian Pacific, returning each time with renewed faith and zip that sped them on to their recent successive World victories in wheat, as well as in oats, flax, timothy, and field peas.

Canada may well be proud of these young frontier pioneers, who have been instrumental in presenting to her a new and wealthy province and the value of their inspiration to other pioneers is incalculable.

No Ice In Iceland

An uncertain winter has been enjoyed by Iceland. Rain fell in January and spoiled the ice skating. Now prominent citizens of Reykjavik urge that funds be raised for the construction of an indoor rink. It may seem incredible in a city so far north, but the only Icelandic skaters can enjoy the sport throughout the winter by the use of artificial ice.

Real Economy Tour

An "economy tour" of the Orient cost Thel Collett, prominent former University of Utah athlete, less than \$2 per day. Collett spent a year touring Hawaii, Japan, Manchuria, China, French Indo-China, Java, Bali, Sumatra, India, Iraq, Turkey, Syria, Palestine and Egypt.

Willie: "Faw, what is discretion?" Faw: "It's something, son, that comes to a person after he's too old for it to do him any good."

W. N. U. 1936

Profits From Pennies

British Royal Mint Makes Dimes At Cost Of Two Pennies

The British Royal Mint earns startling profits from the actual making of money, states a writer in Pearson's who adds that of course silver and bronze coins are not worth anything approaching their face value. Bronze coins are made of an alloy containing ninety-five per cent copper, and costing today about sixty-five pence per ton.

A ton of bronze will make 107,550 pennies, or four hundred and forty-eight pence, so pennies cost about two pence a dozen.

A shilling contains silver worth about three halfpence. Work at the Mint is naturally carried out under the strictest supervision in order to avoid waste of "money." A given quantity of metal supplied at the beginning of a day must be accounted for in the evening either in coin or metal. A certain allowance is made for loss in melting. Even this, however, is partially recovered, as the old pots which are used for melting, and other appliances, are sold for a good price owing to the amount of silver which they contain.

When the temporary furnaces at the Royal Arsenal were dismantled a few years ago, it was found that the bricks and flues contained traces of silver. These were sent to the Mint for treatment, and as a result two thousand, four hundred and fifty ounces of pure silver were recovered to add to the stock.

In fact, the annual profit from the Mint during the past fifty years has been over six hundred and thirty thousand pounds, although in the abnormal year of 1915 it was nearly four and three-quarter million pounds.

Nowadays financiers make money from money by adopting the quickened means of aerial transport. For gold is international money, which in transit it earns no interest for its owners.

Therefore, even an hour or two spent in a journey may mean the saving of a whole day's interest. For instance, gold taken from London to Amsterdam by air can be lodged in the Netherlands Bank on the day of despatch, while that sent by boat has to wait until the following morning.

Knowledge Widespread

Jackson stamped spread into the office and gripped his partner by the shoulder. "Look here," he stammered, "was it you that said I was an infernal racist?"

"Me!" exclaimed the other. "Of course not!"

Jackson chimed down a bit. "Who could it have been then?" he asked.

His partner smiled. "The devil, old man," he replied, "I'm not the only man who knows you."

Historic Home In Danger

The historic Bell homestead where Alexander Graham Bell invented the telephone is in danger of toppling down the banks of the Great River, according to reports of the Bradford, Ontario, parks board. River erosion and a bed of quicksand are the combined menace to the homestead site.

Western Graduates

Western Canada Students Successful At McGill University

Western Canadian students included in the 1935 McGill graduating list were as follows:

Medical Doctor: David B. Bellison, Red Deer, Alberta; Edward W. Douglas, Edmonton, Alberta; Orville E. Kretzschmar, Regina, Saskatchewan; Leoboldus, Ybanc, Sask.; Douglas H. Ross, Drumheller, Alberta; William A. Ishardro, Shandao, Alberta.

Master Of Science: Eugene Mitchell Elkin, Winnipeg, Man.; Frank Samuel Nowood, Roblin, Man.; Norman Leslie Wilson, Birch Falls, Sask. Master Of Engineering: Robert Avery Chipman, Winnipeg, Man.; Thomas Douglas Stanley, High River, Alberta.

Master Of Arts: Ernest Edwin Bowker, Ponoka, Alberta; Glenn Haines, Calgary, Edmonton, Alberta; Lloyd George Reynolds, Chaurin, Alberta; Edward C. Weber, Edmonton, Alberta; Eva Ruder Young, Manitowish, Alberta.

Doctor Of Philosophy: John Maxwell Armstrong, Kamisk, Sask.; Ronald Ernest Richardson, Calgary, Alberta; Charles Vernon Wilbur Birch Hill, Sask.; Carl Arthur Winkler, Vinson, Manitoba.

Bachelor Of Arts: Hunsley Roddick Redpath, Flincher Creek, Alberta. Bachelor Of Commerce: Frederick John McFarland, Calgary, Alberta.

Bachelor Of Engineering: Robert Webster Quigley, Regina, Sask.; Eugene Mitchell, Elkin, Winnipeg, Man.

Liquor Export To U.S.

Export Of Liquor Prohibited Even For Medicinal Purposes

Exportation of liquor to the United States even for medicinal purposes is prohibited under existing regulations, the department of national revenue has stated.

At present no beverage beyond a 3.2 alcoholic content can be granted clearance for the republic, officials said. This is the alcoholic content of beer; the sale for which became legal in the United States on April 6. Recently, U.S. customs officers raised certain restrictions within its own borders on the quantity of liquor which may be prescribed by physicians and this led to conjecture whether export of such liquor to the U.S. would be permitted by Canada.

Strange New Disease

A new disease about which little is known was reported to the State Medical Association by Dr. Gordon New, Rochester. Injection of boiling water is used as a part of the treatment for the disease, which manifests itself in the permanent swelling of the lips and face, Dr. New said.

Seek More Durable Paper

Because the average dollar bill lasts only nine months, scientists in the Bureau of Standards in Washington, D.C., are conducting tests for a more durable paper. Experiments are being made with paper slings such as cash, liquor, cottons, and waxes.

This House Is Odd

A curious house—one of the oddest in the world—has been built in New Jersey. In the shape of an elephant, it contains six floors and is reached by spiral staircases in the "hindlegs." The howdah on the animal's back is sixty-five feet from the ground.

Nearly 3,500 men are employed at present in London's street cleaning department.

ROOSEVELT'S PLEA FOR PEACE RECEIVES WARM RESPONSE

"all the nations of the world should individually agree that they will send no armed force of whatsoever kind across their frontiers"

President F. D. Roosevelt's plea for peace, which was sent to fifty-four nations of the world, has received a warm response. The majority of the nations have accepted his request to curtail armaments and have agreed to the plea of Premier Ramsay MacDonald of Great Britain and that it pledge itself against sending armed forces across its frontiers. Above are six important figures in world affairs who have reacted to the plea. It is significant that President Roosevelt included Josef Stalin, head of Soviet Russia, to which the United States, so far, has denied recognition, in his appeal.

HOW ABOUT ANOTHER NEW BLUEJAY

Have your way about it—tailored or more fashionable. The pattern provides "far" both styles pictured.

The tailored sport blouse is so simple you could almost run it up before breakfast on the amateur sewing machine. It is red and white striped collar.

The little pleated blouse is cotton too. It seems to be the most popular thing in blouse these days. It is red and white organdy. The collar is plain white.

You can make both of them at the cost of one ready bought one. Cruikly crepe slacks and bluffs are other nice mediums.

Style No. 748 is designed for sizes 14, 16, 18, 20 years, 36, 38 and 40 inches bust. Size 16 requires 1 1/2 yards 36-inch with 3 1/2 yard 36-inch contrasting. Price of pattern 20 cents in stamps (coin is preferred). Wrap coin carefully.

How To Order Patterns

Address: Winnipeg Newspaper Union, 175 McDermott Ave., Winnipeg

Pattern No. Size

Name

Town

A Model Village

Beer and cigarettes are not on sale in Hume, an Ohio village of 200 population. Though the town is 150 years old, they have never been sold there. It has two general stores, a garage and a church. There is no law against the sale of these commodities, but it just never has been done, with no likelihood of it starting.

Large cotton mills in Italy are busy on big orders.

Carnegie Institute Astronomer Says Simple Rotation of Earth Gives Evidence of Strange Agency

New Hay Drying Device

Invention Of Scotsman Tried Out Mostly In England

A new method of harvesting is the invention of a Scotsman—Captain Alexander Proctor, of Blairgowrie, now at Barrow, Selby, Yorkshire. It has been tried out mostly in England. The construction of the tripod is inexpensive. The grain is stacked straight from the binder on to the tripods, and so too with forage crops. These are scientifically staked in "huts" (built around the iron tripods) which carry from 100 to 120 sheaves. Ventilating passages are left in the "huts," so that the air can dry the grain. As soon as the grain is ready for threshing a new "hut" or rick is taken into the field. The latter is an arrangement of long wooden staves upon which the grain is backed under the "hut." The crop is then drawn across the field to the breaking mill where the sheaves are fed straight into the machine. In like manner hay can be conveyed direct to the storing shed.

An important feature of the new device for harvesting fodder crops such as hay, clover, lucerne, sainfoin, etc., is that these are all delivered in a beautiful green condition, with their vegetable juices and weight preserved to an unusual degree.

Men At London Zoo

Many Peculiar Things Necessary To Feed Occipitals

The Zoological Gardens in London are still a very favorite attraction, 60,000 visited them on Easter Monday.

The menu, in order to supply the necessary sustenance, variety and vitamins, is both extensive and peculiar. During last year the male of a staple form of the diet included 20 tons of meat mostly horse flesh, 40 tons of bread, 15 tons of biscuits, 40 tons of fish, 23 tons of potatoes, 7 tons of apples and smaller quantities of sugar, onions, mangolds, etc.

To meet the peculiar needs of some of the occupants the wares provided 42 hales of past moss litter, 476 lbs. of dried fish, 448 lbs. of salt eggs and 686 lbs. of meat worms. Another class of dietary is represented by such items as 18 quarters of sunflower seeds, 79 hundredweight of locust beans and 20 quarters of canary seed and among the miscellaneous items are found 140 lbs. of egg yolk and 10 lbs. of golden syrup.

Easy To Repair

New Sport Shoes Have Soles Laced

If the feminine sole gets worn out this spring or summer—it can be changed. That is, if the wearer has on those clever new hand laced leather sport shoes, in which nearly all the soles are partly—including the sole—fastened together by contrasting colored leather thong.

Thus, when the sole gets worn, it can be unclipped, discarded and replaced by a new one.

This footwear is light in weight and excellent for active sports. It comes in Oxford, sandal and T-strap models.

Old felt hats are being made into bedroom slippers in England.

Dr. Gustaf Stromberg, astronomer of the Carnegie Institution's Mount Wilson Observatory, declared the steady daily rotation of the earth gives evidence of a "mysterious agency which affects everything about us."

Discussing a paper of his on the subject just published by the Astronomical Society of the Pacific, Dr. Stromberg said:

"We all learn in school that the earth turns around on its axis. But does the earth really rotate relative to the stars around us. Scientists have lately begun to realize that even such a simple thing as relative motion has no actual meaning without a system of connecting links between the observers and observed objects. These links form what is technically known as a 'metrical field.' It is relative to this field that the earth really rotates."

"When we see the sun, the moon and the stars set and set in the west, it is not directly a rotation relative to these objects we observe, but a rotation relative to a certain structure in the space around us. This field or structure can be detected in other ways than by looking at the stars. If we send radio signals around the earth and receive them after they have made the complete circuit, they will take a longer time to return than if they were sent forward. The reason is that the observer is moving with the earth, while radio waves are unaffected by the earth's turning."

"There is something which governs the motion of such a pendulum," Dr. Stromberg declared, "and everything something affects everything about us from the atoms in our bodies to the most distant stellar system. Whose real nature is beyond our comprehension, permeates, unifies and transcends the whole universe."

Making Educational Survey

Work For Canton Government In Charge Of Chinese Woman

The daughter of a Vancouver Chinese merchant has been appointed by the Canton municipal government to investigate educational development in Canada and the United States. She is Mrs. Chik-Wai-Leung, graduate of McGill and Columbia universities, a native of Vancouver. Her father was Yip Sang, pioneer of British Columbia's Oriental community, who was determined that his daughter should have all the advantages of her adopted country and provided her with the best education obtainable so that she might locate western ideas and culture in the Far East.

Mrs. Chik is now in Canada and she has commenced to make her educational survey. In recent years she has been serving as professor of English at Sun Yat Sen University in Canton as well as principal of several provincial girls' middle school of the same city.

Taller than the average Chinese woman, a fascinating mixture of the Orient and Occident, Mrs. Chik is a perfect example of the modern woman who is interested in education and social problems. Her husband is an important figure in international and diplomatic affairs in China. He, too, is a graduate of Columbia, and it was there that he met his wife.

Mrs. Chik says that within 20 years it is expected that China will provide four years' schooling for 40,000,000 children at a cost of \$1,127,000,000. Already there are fourteen national universities, fifteen as principal and another sixteen recognized private universities in China.

Hard On The Army

General: "Why are you not more careful?"

Army Clerk: "What do you mean, sir?"

General: "Why instead of addressing this letter to the 'intelligence officer' you have addressed it to the 'intelligence officer.' You should know that there is no such person in the army."

Boys Saskatchewan Land

A Chicago grain man has purchased for cash 3,500 acres of the well-known Delton land located between Davidson and Craik in Central Saskatchewan. Arrangements have been made to have the major part of it staked to wheat this year.

UNCALLED FOR REMARKS

The attention of the Review has been drawn to some discouraging remarks directed to visiting players by fans during and after games played by the girls 80's team here. Naturally we were very sorry to hear this as this town has always had the reputation of being a good sport town in all lines.

While we know that this complaint is not general, yet it must be remembered that one or two loose unbridled tongues can spoil the reputation of a whole community just as a few of this calibre gave the city of Edmonton a black eye after a girls basketball game recently.

Personal remarks about other peoples appearance, impediments or deformities are very bad form at any time but to do so in public is ten thousand times worse.

The girls soft ball teams are providing a most enjoyable and healthy form of out door sport both for themselves and the spectators and they should be encouraged in every possible way.

The girls in all teams in the league perform in a most boy-like manner and are a credit to those they represent. It would be too bad if the fans were allowed to dampen or spoil this reputation.

INCONSISTENCY

The selection of Lewis St. George Stubbs, the recently dismissed judge from the Manitoba bench, as the official C.C.F. candidate for the byelection in the Saskatchewan constituency of Mackenzie, will take some explaining both by the candidate and the political party which he represents.

Since the C. C. F. is endorsed by the farmers' political party and since it was the attorney-general of the Farmers' government of Manitoba who laid the charges against Judge Stubbs, which brought about his dismissal, does it not appear passing strange that this same Judge Stubbs is the chosen candidate for the political party endorsed by the Farmers' party?

If in the opinion of the attorney-general of Manitoba Mr. Stubbs was not a fit and proper person to be a judge, how come that so soon after his dismissal he possesses the necessary qualifications to run for political honors. Inconsistency: thy name is politics.

A big crowd from outside points is expected to be in the cliff on July 1st. It would be a good idea if the stores and residents would do a little Dominion Day decorating for the occasion.

JUST FOR FUN

There was a young lady of Warwick,
Who lived in a castle historic,
On the damp castle moor,
She contracted a cold,
And the doctor prescribed paragonic.

The chief difference between

a gum chewing flapper and a cold chewing cove is the thoughtful expression on the face of the cove.

When we ask a friend for his candid opinion, what we really want is his candid opinion.

We have a head on us for the same reason that a pin has. To keep us from going too far.

If all the automobileing, in the world were placed end to end it would be Sunday afternoon.

Epitaph: The tomb monument of a certain genial host bears his name and the inscription: This is on me.

Redcliff Reminiscences

Taken From Our File of June 19 - 1914

Notwithstanding the fact that the past twelve months has been period of financial depression all over the world, Redcliff has gradually forged ahead, and the total assessment more than doubled during that time. Redcliff's total assessment this year is an even \$6,000.00.

The Boy Scouts, who passed their tender foot tests last week were: Norman Matheson, Fred Lewis, Eric Bottwell, Jim Oswald, Wm. Bjornvald, Walter Frickleton, Huntley Moore and Ernest Watts.

The Eldorado Oil Co of Alberta Ltd. was organized on Friday evening with the following officers—Pres Mr. A. W. Woodcock, Vice Pres. W. J. Lang, Sec. Ed L. Stone, Treas. B. L. Martin, consulting engineer Robt. Hamilton, Managing director H.S. Carey, Directors Messrs. Bott, Merry, Fairbairn, Acheson, Creer, Elliott and J. A. Orr.

A rich deposit of silica sand has been discovered on Jas. Fleming's, farm just two miles west of town. In all probability a spur track will be built from the pit to Redcliff.

Word has been received to the effect that the C. N. R. will commence early in June to build the branch line from Hanna to Medicine Hat.

"Opportunity Schools"

Students Learn Every Trade Imaginable At Denver Institution

A school which opens at 8 o'clock in the morning and doesn't close until 9 o'clock at night, where attendance is held entirely to the point and where automobiles and electric motors are repaired by the students, such is the famed "Opportunity School" at Denver, Colorado.

It was one of many described by Dr. J. H. McKechie, chief inspector of schools for Saskatchewan in an address before the audience of teachers and others in the auditorium of Central Collegiate, Regina.

Dr. McKechie told of his recent trip throughout the southwestern portion of the United States, describing the various schools which he visited and the different systems in vogue in cities to the south of the border. His visit, he said, was primarily to visit schools for the deaf.

The Denver school, he stated, is entirely vocational and, certainly, more imaginable is taught students. To get the school grade the school must take in "trade" repair auto, motors and the like, charging the public current rates.

At Minneapolis the same principle applies. There, in a huge girls' vocational school located in one of the busy sections of the city, the students get actual experience by serving meals to the public at a large canteen. Hats and dresses made in the institution are also sold by the students in the same school.

The trend in the States Dr. McKechie said, is toward junior high schools, which he hoped to see some day established in Saskatchewan.

Hot For Vacation Days

...Pleasure Offered Derived From Inexpensive Short Trips
Vacation days are coming! Now is the winter of our discontent made glorious summer by this kind of travel talk. The back yards of periodicals with their alluring appeals to pack up and go to please entire readers from the fiction to the fact.

Even if one has to do his globe-trotting vicariously via the advertising columns until these off the gold standard get back on again, or even if it jumps off, he yet can indulge his best for change. For much of what one gets from these is the sense of what one brings to it. The sense of humor may find its present vent within the confines of an advertisement or the limits of an overnight voyage on a coastwise steamer.

Society, however grand, may sometimes pall, but one's enjoyment can never lose their interest to the lover of his kind. It may even be argued that philosophy is a better teacher in the faraway than as often as in Pullman. Long-legged children grow run because mere walking seems so and the light and airy of the young girls advertising in a magazine may give us delight as a trip to Spain—in those who have eyes to see. —Christian Science Monitor.

Was Once Smart Vehicle

Hansom Cabs Popular In London Thirty Years Ago

London will celebrate this summer the centenary of the hansom cab. Once the most popular of vehicles in which to move about the city, there are but four now left upon the streets of London. Gasoline and the building of the taxicab spell the knell of the hansom.

Thirty years ago there were 7,000 hansom cabs in London alone. Built for two passengers, and with the driver in a "decoy" at the back, the reins passing over the roof of the cab, the hansom was in its day considered the smartest thing upon the streets. The drivers, arrayed in mottos with buttonhole, tall hat and befringed whip, were as witty as any of the contemporary trend of dress and abuse. There was a spice of danger attached to riding in a hansom (which doubtless made them use all the more agreeable to the adventurous) for if the horse did come down it was likely as not that with the cab pitching forward and the doors flying open the occupants would be thrown into the street.

Nowadays the four remaining hansom cabs in London ply their trade around the West End among those who remember the old days. A full-sized hansom cab—taken off the streets as it were—was placed a few days ago in the London museum.

Bank clearings in Mexico have been increasing for several months.

London women are taking up weeding.

DELEGATES FROM SIXTEEN NATIONS ATTEND POSTAL CONFERENCE

Our picture was taken at the opening of the conference of the International Postal Union Executive Committee at Ottawa where delegates from sixteen countries are attending meetings which will extend over six weeks. The conference was opened by Hon. Arthur Sauve, Canadian Postmaster General (second from extreme left), while the President of the Committee, Brig-General H. F. Williamson, C.E.C.B.E., director of British Postal Services, is shown on the extreme right.

Employs Sailing Vessel

Bishop Of The Arctic Uses Boat To Carry Supplies To New Expedition

Acquisition of a 67-foot sailing vessel by Magr. Arne Turquetil, vicar apostolic of Hudson Bay, and known throughout the northern missions as the "Bishop of the Arctic," has secured continuance of many missions of the North American polar regions, it was learned in Montreal.

Each year, about 150 tons of merchandise are shipped to Bishop Turquetil's diocese, and due to heavy transportation rates, the bishop was faced with the alternative of either closing up several important missionary posts or of securing cheaper means of transportation. With the 35-ton boat, the only expense will be the crew's wages. Bishop Turquetil is the only priest of the Roman Catholic Church who has a vessel at his disposal for the execution of missionary duties.

The boat, now stationed at Halifax, will leave soon for Churchill with a load of coal and other merchandise for the priest's mission. The bishop will leave here shortly for Churchill by rail.

No Municipal Election For Fourteen Years

Mayor Of North Carolina Town Considers This Feasible

A political oligarchy reigns in Garysburg, Neale, North Carolina, housing a population of only a few hundred. There hasn't been a municipal election in 14 years and the reason is that the mayor will not consent to such foolish things. The mayor is W. H. Joyner, now from Northampton county. He considers the money for the election to be a waste of money. "I am not a politician," he said, "and I am not a politician."

If an alderman dies or moves or gets tired of his job, Joyner appoints another. Joyner said a lot of people in Garysburg were relatives of his and they'd just as soon "have me for mayor as anyone else." Asked how much the job paid, he said, "Not a cent. Maybe that's why nobody wants it."

Changing Its Course

Captain America Gulf Stream Is Running Closer Inland

Captain George C. Grant, skipper of the steamship "San Rita," is port at Boston with the assertion that the Gulf Stream, the river that flows through the ocean and changed its course and increased its speed. Grant said the stream, which affects climate, had abandoned its regular trend north of Cape Hatteras and was running closer inland. He found it was running about 80 miles off Nantucket lightship, whereas its normal course took it to be nearly 200 miles from the lightship.

Governor-General's Tour

His Excellencies To Visit Western Provinces This Summer

Definite word has been received by Premier Brownlee of Alberta, as to the itinerary of His Excellencies the Earl of Bessborough and Lady Bessborough on their western trip this summer. After attending the World's Grain Congress Show in Regina on August 4, the Governor-General's party will arrive in Edmonton on August 6 and will leave the next day for Peace River. A tour of the north country will be followed by a holiday at Jasper.

Can Keep On Rocking

Deen No Harm To Babies States University Professor

Harassed parents, torn between a desire to rear their infant along scientific lines and an urge to keep the child contented, may welcome this. Dr. W. C. Beasley, professor of psychology at the Johns Hopkins University, has placed his stamp of approval on one thing mothers have been doing for centuries—rocking their children. Opposing that group which has held that under no circumstances should the infant be rocked, Dr. Beasley said actual experiments had proved it does not harm the child.

Dr. Beasley even went further. He went that age-old habit fathers have of swinging their babies high in the air does no harm—provided, of course, the baby is not dropped.

Old Medical Practice

Leeches Are Still Used By Hospitals In London, England

Those who believe that the ancient medical practice of "blood-letting by leeches" is a date-dated may be surprised to learn more than 1,000 leeches are imported weekly by air mail from France for up-to-date London hospitals.

These leeches are gathered from pools in the south of France. They are packed in light wooden boxes containing mud and damp moss. When they reach their destination, they are placed in a tank of clean water, where they remain, unfed, until their use is required.

Oxford Group Wedding

Winnipeg, Man.—First marriage among the Oxford Group in Canada will take place in Quebec June 1, during a house party at the Chateau Frontenac. It was announced here, the bride, Ruth Lambert, is from South Africa, and the bridegroom, Jack Brook, of Boston, Mass. Bride-maiden are from all parts of Europe and the guests will be from all parts of the world.

The Irish Free State will not issue permits to new companies unless half of the capital is owned by Free State nationals.

Britain has a higher-wages campaign.

United States First Circus

Originated In Year 1792 In Philadelphia

The first circus in the United States originated in Philadelphia in the riding school started by John Bill Rickels in 1792. The riding school had as its distinguished patron George Washington, of whom it is recorded "he put aside care and worries and went to Rickels' Riding School to seek enjoyment and pleasure."

As part of his plan to draw clients, Rickels employed a man by the name of McDonald to act "the clown." Later he hired Sigmund and Maitland Squarrie, the former a tight rope walker and the latter an equestrienne, to entertain his customers.

Later another Philadelphia started a circus, eight years before P. T. Barnum opened his "Greatest Show on Earth," in New York. He was Adam Forepaugh, a Civil War horse trader.

Leprosy Not Inherited

Disease Never Contracted By Healthy Persons, States Doctor

Leprosy is not inherited and children do not contract the disease if separated early from their parents. So said Dr. L. Whitaker to members of the Mission to Lepers in London, England. Pointing out that a healthy person would never take the disease, Dr. Whitaker said that there was very little of it in Canada and that there was no need for fear when an occasional case was discovered.

As a rule the disease occurs between the ages of 10 and 30, although it may be contracted in middle life, Dr. Whitaker said.

Hollanders Buying Cars

Automobiles are not manufactured in Holland and consequently imports are heavy. The use of this form of conveyance has been increasing and, despite the depression, the automobile trade has been one of the few branches of business to maintain a relatively prosperous position. On August 1, 1923 the latest date on which information is available—there were 75,368 passenger motor cars in operation in the Netherlands.

The element of hydrogen is the lightest substance known to science.

Gardening Notes

By Gordon Lindsay Smith

Roses require fairly deep cultivation and heavy fertilizing up until the first of July in order to push growth and produce flowers. After this, however, it is advisable to slow down so that the plants may get hardened before the cold weather sets in. In this process, which takes two or three months, it is a good plan to plant a few low-growing plants such as pansies, calendulas, violas or dwarf nasturtiums around the roses, which will brighten up the garden and benefit the bushes by absorbing moisture. At this time a good quick-acting fertilizer is advised. After July, however, a slower fertilizer, such as liquid manure, or bone meal should be used.

Pests and Diseases.—Control of insect pests and common diseases is not difficult where prompt measures are taken just as soon as the enemies appear. It is better to be on the safe side, however, than to wait until it is very important, however, that something is known about the habits of these pests that one is trying to control. Thoroughly spraying insect pests are divided into two groups, those that take their food by biting holes in the foliage and those that simply suck out the juices. The biters are soon discovered, while the others make their presence known by wilting or dying foliage. When something like this happens in a garden near, one should take precautions immediately. For the sucking insects, such as the Colorado potato beetle, Green or Aeneas of Lead, while the "suckers" are controlled by a spray that will burn them but not damage the foliage. Under this heading, Nicotinic Sulphate or more commonly known as "Black Leaf 40," Whale Oil or Fish Emulsion, or any other repellent recommended by seedsmen. Often one can get a combination of burning and poisoning in a special mixture and this is usually the best to procure for small gardens as it is prepared especially for the purpose. Cut worms are attracted by polished and sweetened bread. Plugging drains are usually controlled by dust powders like special, finely ground sulfur. In the case of the Colorado potato beetle, which appear on beans during a wet season very little can be done except to keep out of the patch when the foliage is damp and to plant the vegetable in a different place next year.

Celery Out New.—Contrary to common general opinion, celery is not a difficult plant to grow and a large quantity can be produced in a very small space. The first rows for early sale should be set out early in the season, with the main planting about the first week in July. Plants may be purchased from vendors any time at this time. The ideal soil is a very rich, well-drained mud, though practically any combination will do so long as the fertilizer is applied in the drainage and apply lots of water. Give the plants from six to eight inches apart and sow may be as close together as we wish, making allowance for cultivation. Keep the ground thoroughly worked up all the time. Light applications of commercial fertilizer just after the plants are set out and again in two or three weeks will help growth along wonderfully. The simplest way to keep celery in the fall is to place boards close up against the plants on both sides of the row and bank with earth. In the fall plants may be lifted without bleaching, and stored. If tightly packed together in basket baskets in some dark place they will be white and tender in a week or ten days.

Strange Charge Offering

Muskat Raisins Are Placed On Collection Plate

Fifty muskat raisins on a collection plate in church!

This was the unusual sight witnessed by persons who made up the congregation of the Anglican mission at Moose Lake recently. Moose Lake is a trading post about 100 miles from the Saskatchewan River from The Prairies. The rats were placed on the plate by Indians upon their first attendance at church following the spring hunt.

At present, rats are the medium of exchange in the remote outposts. They range in value from 10 to 40 cents, according to size and quality, and far market quotations.

The Moose Lake mission is presided over by a lay reader from a theological school. There are two families of whites at Moose Lake, besides two more Indian families. They need \$100 per year to the Church of England, and keep the mission building in repair.

At a meeting of the London Women's Institute, on Dartmouth, Mrs. Fraser was a competitor for raising jelly with knitting needles.

New Legislation

Winnipeg, Man.—The act for maintenance of parents by their children is new legislation of the session of the legislature just closed, providing that parents who are indigent shall be assisted by their children when the latter in the opinion of a court or magistrate are in a financial position to do so.

Stock poisoning from local larvae is reported on farms west of Edmonton, Alberta.

Mrs. R. Scanland Passed Away Monday

Had Been Ill For The Past Four Months
(Contributed)

The angel of death has again visited our midst and removed from among us one of our most esteemed citizens, in the person of Mrs. R. Scanland, who was born in Brierfield, Lancashire, England, 61 years ago. Deceased came from England over twenty years ago. With her husband she experienced pioneer life on a homestead in the Suffield district, before settling in Redcliff eight years ago. Of her homestead years Mrs. Scanland had a wonderful fund of old time experiences to relate. These she told in her own pleasing manner and gave pleasure to many a listener. She was an enthusiastic church worker and was prominent in several church organizations at Gordon.

Memorial where she labored untiringly. She loved her home, her church and her God.

While deceased had suffered intense pain for the past four months, her interest in her friends and surroundings never failed, showing her thoughtful and unselfish disposition. By her sunny nature and appealing manner Mrs. Scanland has made herself a large circle of friends who will greatly miss her Christian influence.

Deceased leaves to mourn her loss, her husband; a brother and sister in England, and a sister, Mrs. Kerr, in Washington, who arrived here a week ago.

In the passing of Mrs. Scanland we feel that Redcliff loses one of its most esteemed residents.

(Continued from page 1)

next three and so on. The land should be in good condition and the weeds kept under control.

Several pictures were shown showing how the Manby ranch had been developed from a wild stretch of prairie to its present condition of beauty and cultivation by care. Slides of herds which had been developed by scientific care and feeding were also shown.

Mayor Wertz acted as chairman and during the evening Hector Lang M. L. A. and Dr. Gershaw, M. P. Addressed the meeting.

The speakers extended an invitation to residents of this district to visit their ranch to see what is being done there.
